

Public administration looks to Open Source

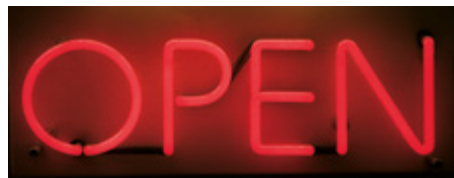

Procurement season is upon us and it is good news for open source supporters. Last week the National Procurement Services announced the winning ICT providers and who will be the ICT suppliers for two of the four frameworks, for desktops and for the IT department.

2014 - with freedom of choice on the menu

We have been talking about Open Source and the freedom of choosing the best solutions for a long time. But even if we have been in the business for a while (since 20 years actually)

we still think that today's mix of physical, virtual and cloud based systems makes it really exciting to work with Open Source and open platforms.

Does API design effect company profitability?

A clear (and logical) trend within API-development points towards the importance of lifting the abstraction level from the technical layer to the "human-friendly-layer", since, in the end, it is humans that will use the API. What do we mean by that?

Is it a question of SOA or API?

Should you choose a SOA architecture or a API structure for your internal system integration? Maybe the answer is - both! Combining the SOA architecture and structured APIs will give you four advantages.
