LATEST NEWS:

Why team work matters when it comes to API

To be able to fully benefit from API's you will need to co-operate within your company. You need to analyse your customers needs, work with usability, marketing and in the end sell your product. This will involve your developers as well as employees from the business side.

The coolest Open Source project right now

Ever heard of Docker and wondering why the hype? There are, of course, several reasons why Docker is hip right now, the popularity of Linux being one of them. The other one is virtualization. And the third is the solution to the problem we all are struggling with, the ability to move applications between different types of infrastructure. Containers simply fit in!

A rebel with a cause

In a way Open Source reminds us of those rebel kids in movies. The poet bad boy on his motorbike, the trouble maker who lives to dance or the fashion victim with the voice of an angel. They do not fit in to a rigorous society but their creativity and passion can not be contained no matter how many dark looks they face.

Read more about Open Source, Ericsson and Linus Torvalds

API for business development

Did you know that you can use API Management as an enabler for your digital business development? If not or if you are curious on how you can use it, start by reading below blog post covering the matter.

Part one blog post on API Management (Swedish), part two will be published shortly

Framework agreement with one of the world's largest telecom suppliers

We have signed a general framework agreement with one of the world's largest telecom suppliers in relation to services surrounding Open Source software. The agreement encompasses support for technology platforms, along with support in connection with development and operation. Training within the respective technology also comes under the agreement. The agreement is global, which means that all the customer's companies can call-off products and services from it.
