LATEST NEWS:

Do not develop and operate your APIs - DevOps them

To make your APIs successful in this context, you need to develop APIs that are easy to modify, deploy, maintain and operate. You also need a plan to handle unexpected situations and manage them in an accurate manner.

This is why we introduce DevOps thinking to your API endeavors.

Blog post on API Readiness - DevOps

Improving the environment through APIs

Västtrafik has developed APIs with the overall goal to improve the travel experience for passengers through digital services. And by doing this also convince more people to use public transportation, which is beneficial both to society and the environment.

or, if you prefer, the SlideShare on version control

Your API strategy and objectives are in place - where to go next?

The next logical step is to decide what information must be made available and how it can be interestingly presented to the correct target group in order to maximize impact. It is time to design and present your API. In order for your API to be successful however, you need to ask yourself a couple of questions...

December fun for sysadmins

Our staff will this December publish an advent calendar filled with tips and tricks for sysadmins!

Taking a page from the sysadvent blog, we will in a similar spirit publish one article every day in December, ending on the 24th.

The article contents will range from low-level sysadmin tools to simple usage hints for making your day a little bit better.

The sysadvent blog will be found here! We hope you will enjoy the articles!

Meetup: Configuration Management & Integration

We host our last Meetup this year the 24th of November with the following program:

- Are you API Ready?
- Linux infrastructure management workflow at the University of Oslo
- The pay offs of implementing config management with Puppet
