

LATEST NEWS:

More fun - less tedious work with Puppet

Managing IT infrastructure is not always as much fun as you have been led to believe. In fact, it can be downright unpleasant. System Administrators and IT Managers face a constant barrage of new requirements while maintaining existing systems and searching for the elusive 99.999% uptime.

Puppet is a model-driven Open Source framework designed to efficiently manage data center infrastructure. It is the System Administrators best friend, enabling him/her to focus on managing infrastructure as a whole rather than spending time on mundane tasks.

Learn how to efficiently manage your data center infrastructure in our [Puppet Master Training](#) in Oslo, October 19.

JBoss As 6.1.0 released!

One of the highlights of this release, is that this was mainly driven by the community members. Many of the JBoss AS developers were busy with AS7 activities, so the community members were asked to volunteer for providing fixes for 6.1.0. So we increased our contribution to the community by donating even more developer resources and experience from our third line support organisation.

Brand new Alfresco app

An increasing demand of services around Alfresco has led to a new partnership between us and 2conciate. Together we can offer our customers an integration with 2c8, a modeling tool for visualisation of enterprise processes, giving the users new possibilities to describe their organisation, and at the same time we can show how easy it is to integrate such applications with Alfresco, hence creating added value for the customer.
